

INTRODUCING NEW **NAPA Premium Rotors**

Same Great Product With Enhanced Corrosion Protection

- Consistency across the line, adding Graphite Guard corrosion protection to ALL NAPA® Premium Rotors
- OE matched metallurgy G3000/G3500 for consistent reliable braking
- OE matched mass & vane configuration to manage heat and harmonics
- Micro Finish, CNC machined brake finish for smooth initial break-in
- 24 Month/24,000 Mile Warranty
- 99% Coverage of VIO – 2,000 SKUs

NAPA Premium Graphite Guard Rotors offer a level of protection against rust and corrosion to help extend the service life of the rotor. **Graphite Guard** is tested to withstand 120 hours of salt spray exposure.

Updated Graphic Packaging

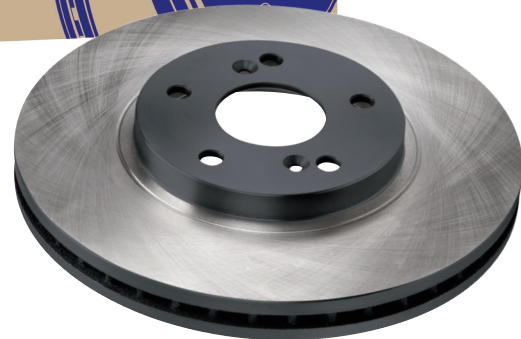

Same durable brown box,
NEW updated graphics.

Contact your NAPA AUTO PARTS Store for additional information.

NAPA NB Rotor Program Details

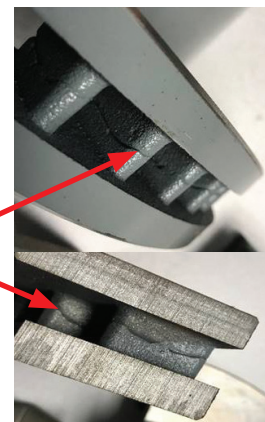

- **Field Abbrev:** NB
- **HQ Abbrev:** NBO
- **Group Codes:** 500, 502, 504
- **Bulletin:** 23-431
- **Product Launch:** Running change, August 1st
- **Inventory:** Product stocked in all NAPA DCs
- **Warranty:** CILOW
- **Field Support:** Undercar ASMs
- **Packaging / Boxes:** New updated graphic with same durable box

6 Things to Consider When Choosing a Rotor

How do you know if you're getting what you're paying for? Consistency is key! Many competitive rotors are inconsistent with OE, which is why it's important to consider these variables before deciding on which rotor to buy.

- | | |
|-----------------------|---|
| Tolerances – | If not OE matched, possible rotor pulsation when the brakes are applied.
NAPA rotors are within OE specifications for smooth braking with every stop. |
| Metallurgy – | If not OE matched, inconsistent heat dissipation and braking performance.
NAPA ensures your rotor performs as intended with OE matched metallurgy. |
| Vane Count – | If not OE matched, directly impacts strength of the rotor and its ability to dissipate heat.
NAPA matches OE vane configuration to help to transfer heat away from the plate. |
| Cast Quality – | If not OE matched, improper casting can lead to serious problems down the road.
NAPA OE matched cast rotors are quality controlled for safe operation. |
| Balancing – | If not OE matched, improper balance can lead to vibration and noise.
NAPA OE matched rotors are 100% verified for balance. |
| Protection – | If not OE matched, inferior paint or coating can lead to premature corrosion.
NAPA OE like finishes and coatings offer the best defense against rust and corrosion. |

NAPA rotors are consistent with OE in every category. And, consistent quality means consistent performance.

With NAPA, you get what you pay for!
